

PUMPING EQUIPMENT

Trash 3" Pump (PPT)

The 3 inch Trash Pump is purely designed to pump water containing semi-solids. By referring to trash means that it is water containing semi-solids (rocks, etc.). It can pump at approximately 2 500L p/min. This pump can not pump chemicals or sludge.

Do's:

Check engine oil every 4 Hours.

The machine does NOT prime itself before start (open the top plug and fill it with water).

The heliflex hose can go in about 5M.

Check both hoses for leaks.

Make sure you pull the starter rope correctly (with least tension on the sides).

Insure the rubber seals are present in both hoses couplings.

Don'ts:

Do not run dry, always keep an eye on the water level from where the pump is working from and avoid the pump running dry of water as this causes serious damage to the internal parts of the pump.

Do not run the Inlet with out a seal or 'O'-Ring. Make sure it's completely sealed.

Do not put the hoses in the way of traffic where vehicles ext will be driving over it as this will damage the hoses and cause leaks.

Use only for water. Do not pump chemicals.

Accessories:

Inlet Heliflex hose with head attachment.

Outlet hose.
